

Commonly Used Plugins Walkthrough

1. Select the **myapp** project and run as **Maven Build...** Set Goals to **site**.

After you refresh the **myapp** project should look like this

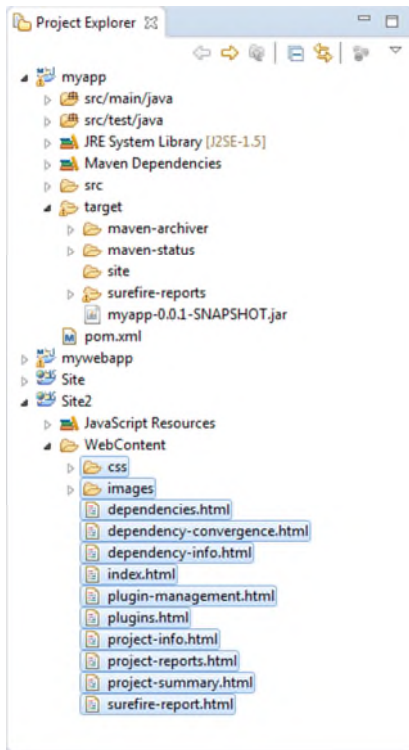

2. Create a new **Static Web Project** and call it **Site2**. Set the server to **HTTP Preview** or **J2EE Preview**.

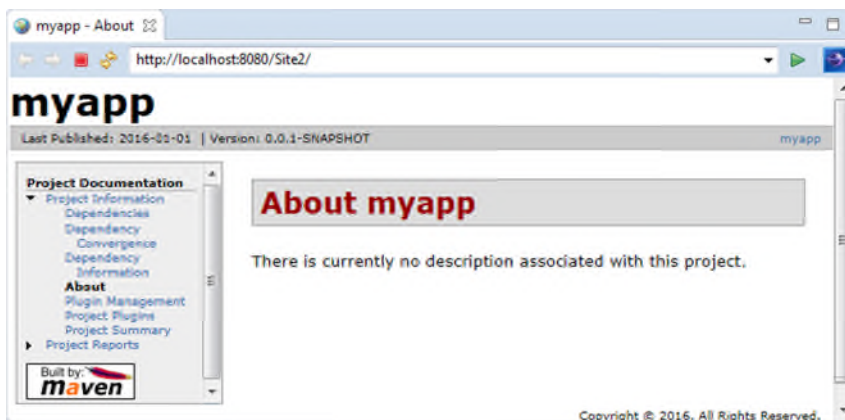

Commonly Used Plugins Walkthrough

3. Select all files and folders in the **myapp\target\site** folder and move them to **Site2\WebContent**.

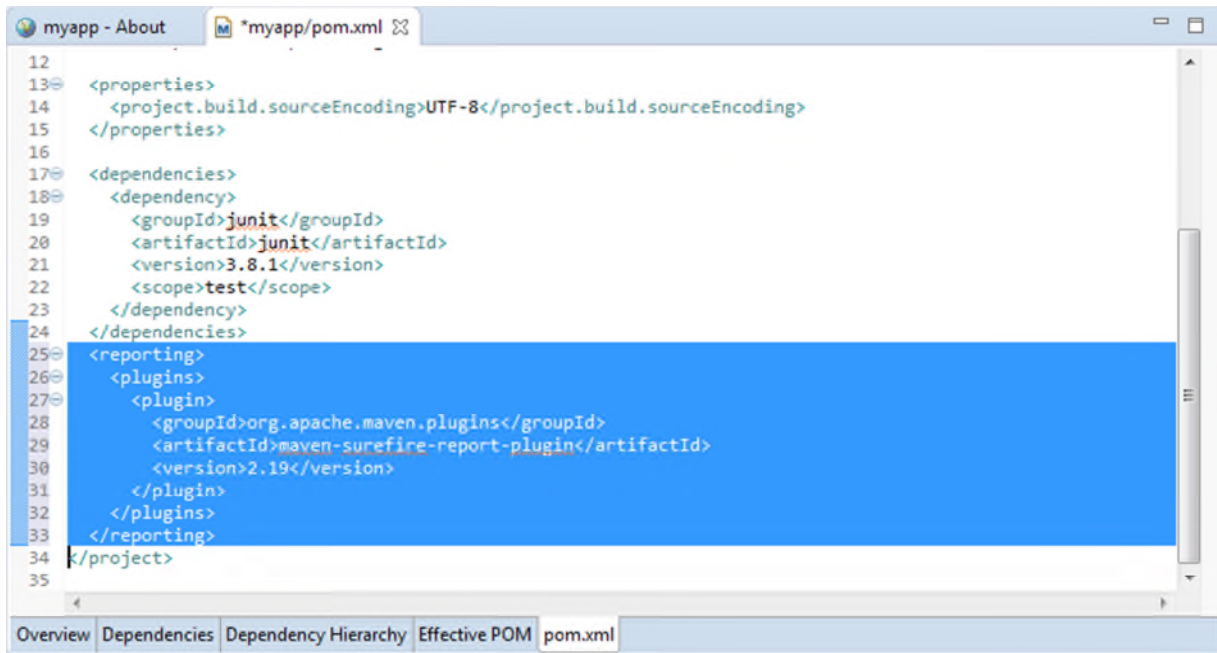

4. Run the **Site2** project on the **HTTP Preview** or **J2EE Preview** server.

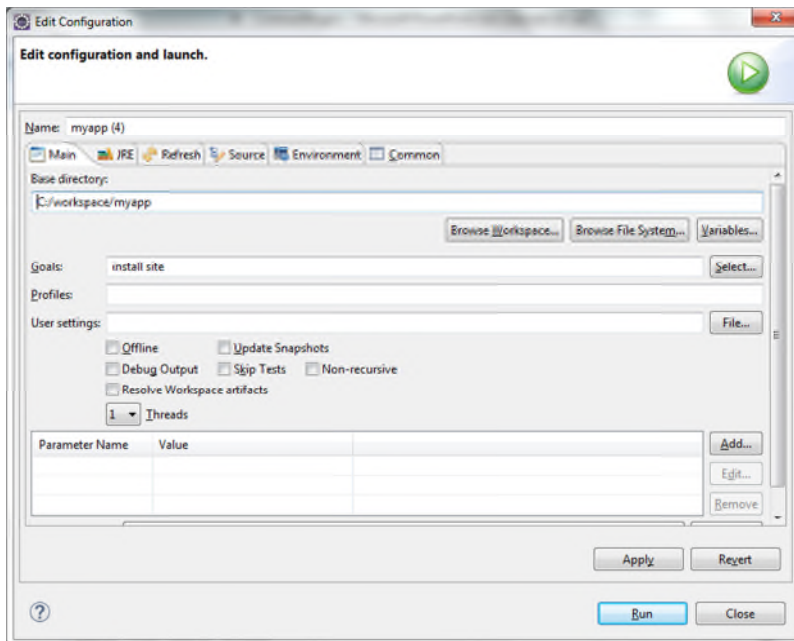

Commonly Used Plugins Walkthrough

5. In myapp\pom.xml, add the surefire report. Add the lines highlighted in blue below.

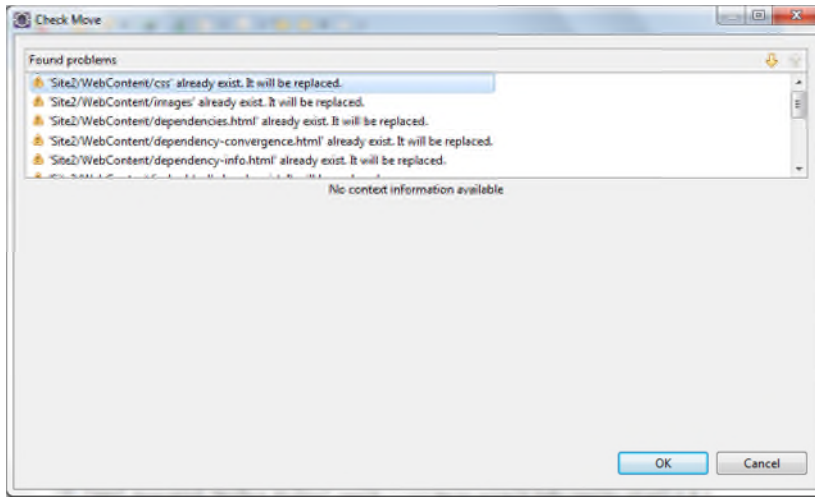

6. Select **Run as... → Maven install...** Put **install** and **site** in the **Goals** field. Hit **Run**.

Commonly Used Plugins Walkthrough

7. Move the files from **myapp\target\site** to **Site2\WebContent**. (Some files will need to be overwritten).

8. When you run **Site2** on **HTTP Preview** or **J2EE Preview** server it should look like this:
