# Multi-Module Builds Walkthrough
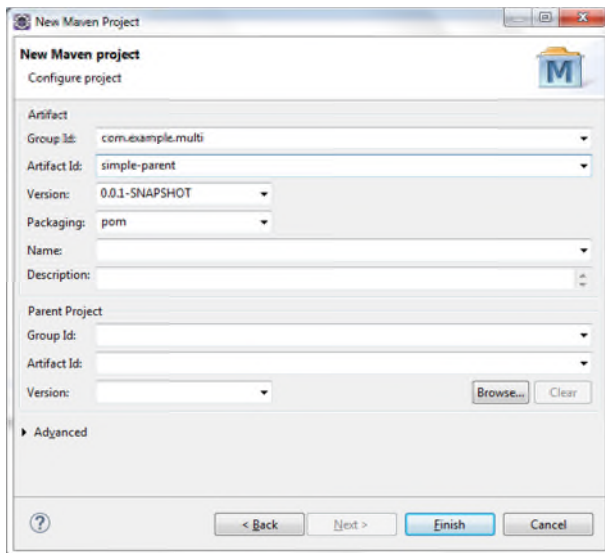

1. Create a New Maven project.

Select **Create a simple project** and **Use default Workspace location.**

Click **Next.**

Enter: **Group Id: com.example.multi**   **Artifact Id: simple-parent**   **Packaging: pom**

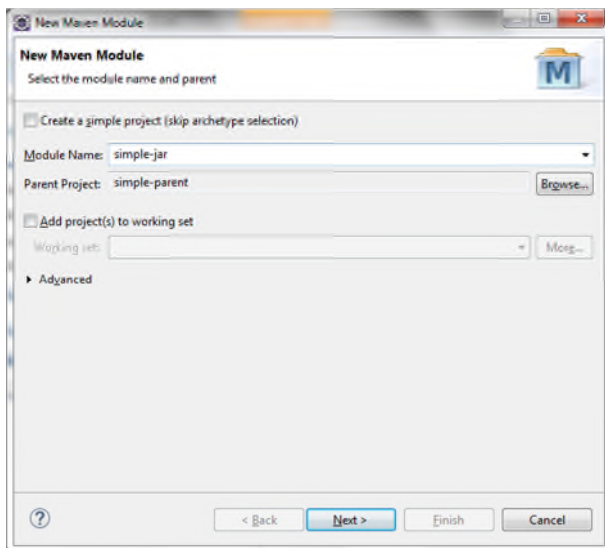

Click **Finish.**

Multi-Module Builds Walkthrough
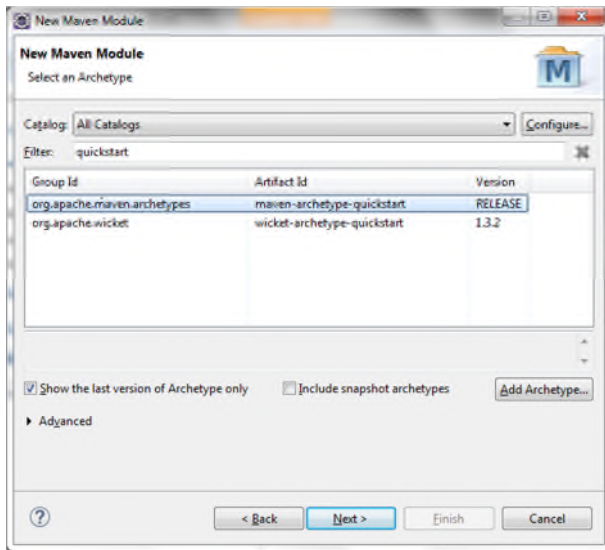

2. Open **pom.xml.**

Under **Modules** click **Create…**

Set **Module Name** to **simple-jar** and click **Next.**

Multi-Module Builds Walkthrough

Select **maven-archetype-quickstart,** click **Next** and **Finish.**

3. Create another Module named **simple-webapp. S**et **Archetype** to **maven-archetype-webapp.**

4. Run simple-parent as **Maven Build…** with goals **install** and **site.**

5. Create **Static Web Project** name **MultiSite** and set **Target Runtime** to **HTTP Preview.**

6. Copy the files created in **simple-parent\target\site** to **MultiSite\WebContent.**

7. Run **MultiSite** on **HTTP Preview** server.

It should look like this:
